

An idea to get new subscribers for SHE Newsletter: English teachers' role

Annamária Somhegyi M.D. Ph.D.
National coordinator, Hungary

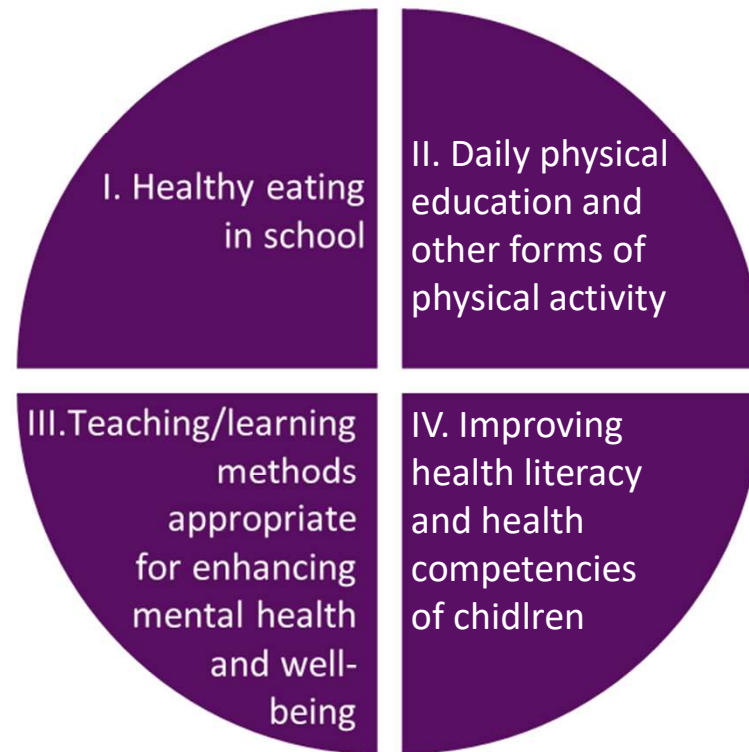

SHE Assembly Meeting 2021

HHP prescribed for all schools since 2012:

Four main health promoting tasks for teachers
to do in their daily work - with participation of the whole school and civil society

BETTER HEALTH = BETTER ACADEMIC ACHIEVEMENT

Situation in Hungary

- Hungarian language is much different from any other European languages
- Maybe this is why it is a problem for many to speak English
- There is always too spare time to learn about health
- But all parents want that their children learned English well
- Why not combine these tasks?

Situation in Hungary

- All teachers have to be a member of the National Arm of Teachers
- There is a special division for language teachers
- There are 61 school-districts and all have a director, who is in continuous contact with the school-leaders

In practice:

I asked the leader of the division for teaching languages to write to all language teachers:

- They could be a subscriber for SHE Newsletter
- So they could use English materials in their classes, which are new and show the life of schools from many countries

This might be interesting for children, and they could improve their English and health skills all at once.

What has happened:

- The leader of division has sent out her letter:
 - to all language teachers in Hungary
 - to all leaders of school-districts also, who may give a special emphasis on the matter.

Ulla said next day, that she got several new subscribers

In September may come even more subscribers, because the leader of division will sent her letter again in August.
